On the previously listed affected models, the possibility of an air leak between the heat dam gasket and the cylinder has been detected. In manufacturing, Loctite 510 is being used to seal this area. If a saw is acting like its running lean has poor acceleration, has unstable carburetor adjustments or has a fluctuating idle speed, it could have an air leak. To correct an air leak, sparingly apply a bead of Loctite 510 to the cylinder and install the gasket and heat dam. Be careful not to plug the pulse hole with Loctite.

Failures of this type are covered by warranty. Use failcode FF17 when filling out the warranty claim

The crankshaft in the above listed affected models has been redesigned to accept a rotor with the key cast into the rotor. This change uses a shallow key slot and improves the strength of the crankshaft on the rotor side. When you order the crankshaft, you will get a new rotor with it. The replacement short block is also supplied with the rotor.

The following chart gives the keyed and cast key part numbers:

	Short Blocks		Crankshafts	
	Keyed	Cast Key w/rotor	Keyed	Cast Key w/rotor
33cc units	A08671	UP03696	A08670A	UP03587
38cc units	A08672	UP03853	A08670A	UP03587
45cc units	UP00127	UP04168	UP00131	UP04167

Please make a note in your parts book in order to obtain the proper part.

UT08057B	UT08066	UT08069B	UT08089	UT08071R

A potential fuel leak can occur if the fuel line comes in contact with the engine shroud. Leaking fuel creates a potential fire hazard. If upon examination of the blower, the fuel line is in contact with the shroud or within 1/4" of the shroud (figure 1), the shroud must be reworked. Cut off the interfering plastic with diagonal cutting pliers (figure 2&3).

The procedure for rework is:

- 1) Remove the five screws that hold the shroud on and remove the shroud.
- 2) Rework the shroud by cutting the area away as indicated in the figure 3.
- 3) Reattach the shroud using the screws removed. Torque the screws to 30-40 inch pounds.
- 4) Verify that there is clearance between the shroud and the fuel line (figure 4).

**NOTE:** If the fuel line is damaged, replace the fuel tank and add it to the claim.

In addition, all UP04314 shrouds in your stock must be reworked.

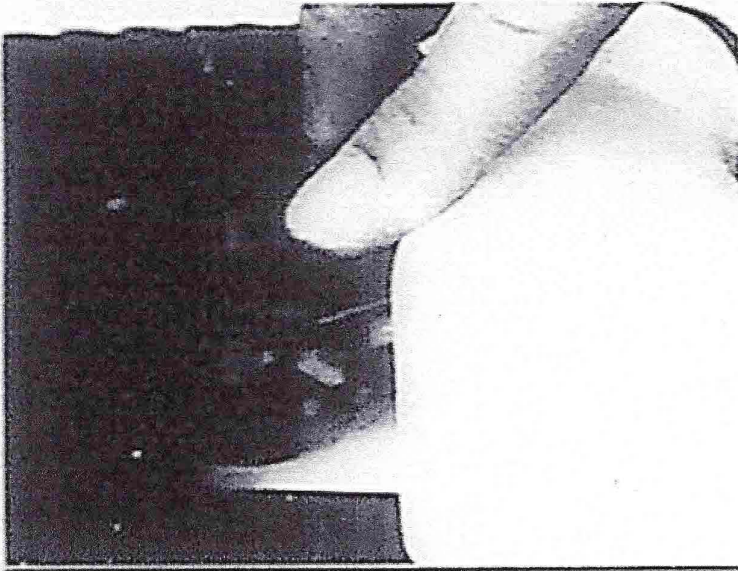

This repair will be reimbursed under warranty.

Use code: CV67 Flat rate: .3

We thank you in advance for your cooperation and apologize for any inconvenience.

**SUBJECT: DEFECTIVE WELD ON 14" WHEEL GUARDS**

**AFFECTS: MP88 14" UT05074A SERIAL NUMBERS:  
HB0240001 THROUGH AND INCLUDING HB0240096**

The inner plate that captures the adjustment knob screw may have been inadequately spot-welded, which may allow the plate to fall off during operation of the saw.

Dealers received a notification by telephone to stop sale and to obtain customer information.

Customers should cease using the above-mentioned MP88 14" until a replacement wheel arm assembly is sent and installed.

The repair will be reimbursed through warranty. All units repaired may be placed on one warranty claim form. Serial numbers for each unit must be listed separately on the form.

**SUBJECT:** NEW ROUTING FOR CG IDLE CONTROL

**AFFECTS:** CG SERIES GENERATORS UT03762-A,B,C,  
UT03763,A,B,C, UT03764,A,B,C

The CG generator is designed with a MAX Power switch that allows operation in either 120-volt only mode or 120/240 volts mode.

The CG generator should go from full speed to idle speed in either MAX Power switch position when power requirements are removed.

If you encounter a generator that does not go to idle when the switch is in one position but will go to idle in the other, reroute the leads to the idle control board as shown below to correct.

**SUBJECT: HAC420 PUMP END****AFFECTS: HCP420 UT01609  
HAC420 UT01612**

Beginning in May 1999 John Deere Consumer Products, Inc began receiving HAC420 pumps with aluminum impellers and volutes from our supplier. These pumps are incorrectly identified as HCP420.

The pump ends of the HAC420 and HCP420 are not interchangeable.

A four- (4) bolt inlet fitting can visually identify HAC420 pumps with aluminum internal parts; HCP420 pumps with cast iron internal parts use a three- (3) bolt inlet fitting. Listed below are the part numbers for the new HAC420 service parts.

- John Deere Consumer Products, Inc will extend the warranty for two (2) years from date of purchase for the impeller and volute on HAC420 models incorrectly identified as HCP420.
- No cast iron volutes or impellers are available for the HAC420.

**NO. H00A-010**

**SUBJECT:       PREMATURE CLUTCH FAILURE**

**AFFECTS       JOHN DEERE CONSUMER PRODUCTS MANUFACTURED  
CLUTCH STRING TRIMMERS / BRUSHCUTTERS  
C300 UT20775 , BC900 UT15172 AND (INT'L) F3040 UT15176  
BEGINNING WITH THE SERIAL NUMBER MB084XXXX OR  
MB087XXXXOR MB088XXXX**

Some of the above mentioned units were built with an incorrect clutch spacer. This may result in the clutch shoe expanding outside of the clutch drum.

The procedure for rework is:

- 1) Remove the four screws securing the control handle assembly to the engine housing.
- 2) Remove the clutch drum with a 6" T-25 TORX screwdriver.
- 3) Remove the two clutch shoes one at a time in a counter clockwise direction.
- 4) Remove the original spacer, discard and replace with new spacer part number UP04118.
- 5) Reassemble the unit.

**NOTE:** Do not run engine without clutch drum in place. Make sure the clutch drum covers all clutch shoes. Be sure that all parts (including the outside housing) are properly installed. If not fully assembled, an exposed clutch shoe can break and may cause an injury.

This repair will be reimbursed under warranty.

Use code: CV69 Flat rate: .4

We thank you in advance for your cooperation and apologize for any inconvenience.

**SUBJECT: New Dolly Kit UP05224 and Lifting Bail UP05223**

**AFFECTS: LRX5600 UT03822  
LRXE5600 UT03823**

John Deere Consumer Products is pleased to announce the addition of two accessories designed to make the transporting of generators and pumps easier!

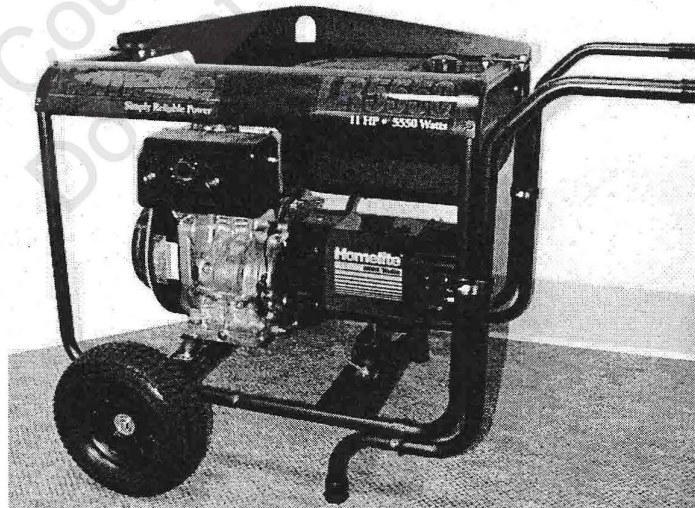

- **Get your generator or pump a set of wheels.**

The **UP05224 Dolly Kit** is a wheel and handle kit for use on large frame generators and pumps. The kit contains semi-pneumatic wheels, axle, fasteners and handles with grips. The kit is an ease to assemble using hand tools. **No drilling required!** In minutes, your generator or pump will be ready for transporting effortlessly.

- **Give your generator some upward mobility.**

The **UP05223 Lifting Bail** is an ideal accessory for the transporting of generators by crane or hoist. The heavy-duty solid steel bail attaches to the frame with hand tools and in minutes, you are ready for upward mobility!

Both parts are available through the JDCP Distribution Network.

**SUBJECT: NEW HCP630 PUMP REPLACES UT01610**

**AFFECTS: HCP630 UT01613**

JDCP introduces a new HCP630 pump. Features on this pump are a cast iron impeller and an aluminum volute and pump housing. A dependable 5.5 Honda engine powers the pump. UT01610 is no longer available and is replaced by UT01613.

Parts are NOT interchangeable between the UT01610 and UT01613. New parts for the pump are listed below. JDCP will continue to supply replacement parts for UT01610. Parts for both versions of the pumps are available through the JDCP parts distribution network.

<u>Part number</u>	<u>Description</u>
• UP06627	Casing
• UP06628	Cover
• UP06629	Inlet Pipe
• UP06630	Outlet Pipe
• UP06631	Impeller
• UP06632	Volute
• UP06633	Inlet Valve
• UP06634	Filler Cap
• UP06635	Shim 0.3mm
• UP06636	Shim 0.6mm
• UP06637	Seal
• UP06667	Bolt M8x28
• UP06669	Bolt M8x25
• UP06671	Bolt M6x60
• UP06672	Bolt M6x50
• UP06673	Washer 8mm
• UP06675	O-ring 86x3.5
• UP06676	O-ring 24x3.5
• UP06677	O-ring 70x5.7
• UP06678	O-ring 225x3.5
• UP06679	Frame
• UP06681	Isolator

## **BULLETIN**

NO. H00A-015

**SUBJECT: FUEL LEAK**

**AFFECTS: MP88 MODELS UT05056, UT05073A, AND UT05074A  
SERIAL NUMBER RANGE: HB1180001 THROUGH HB2869999**

JDCP became aware of MP88 saws with an inadequate seal between the two handle halves that make up the fuel tank and determined that a fuel leak may occur.

All MP88 multipurpose saws with serial numbers referenced above must have the engine housing, part number A49770A replaced. The engine housing assembly functions as the rear handle and the fuel tank for the saw.

Contact all customers in possession of saws within the affected serial number range and repair the saws with new engine housings.

All models of MP88 saws, serial numbers beginning with HB2870001, received after 15 November 2000, will not require repair.

Please use job number CD12 flat rate 0.9 hour.

Submit each repair on a separate warranty claim. Please furnish serial number and UT number to assure processing.

We thank you for your cooperation and apologize in advance for any inconvenience.

# BULLETIN

NO. H00A-016

**SUBJECT: LR5000T GENERATOR FAILURE DUE TO STACK-RUB  
PROPER INSTALLATION OF ROTOR AND STATOR**

**AFFECTS: LR5000T UT03829**

When repairing LR5000T generators exhibiting stack-rub, that is, the rotor contacting the stator during operation, follow the procedure listed below. Please follow the stator to engine alignment procedure to prevent recurrence of the stack-rub failure mode.

### Generator Assembly

Loosen engine-mounting bolts so the engine can be tilted slightly to allow generator end to be installed properly.

Wipe engine crankshaft and rotor shaft taper clean of grease and debris.

Assemble the generator by applying thread-locking compound to the bolts securing the generator end bell (item 26) to the engine. Torque the bolts to the specifications listed in Table 1

If a new rotor (item 23) is being installed, remove the fan, if not damaged, from the defective rotor. Install the fan (item 24) and four screws (item 25) on the new rotor. Slide the rotor and fan assembly onto the crankshaft.

Insert the rotor bolt (item 21) through the lock washer (item 22) and rotor into the crankshaft. Tighten the bolt finger tight.

The rotor bolt will be tightened after the assembly of the stator and brush head is complete. The bolt needs to remain loose throughout the assembly procedure to allow the rotor and stator to align properly with the housing and crankshaft.

Inspect stator for excess varnish or bent laminations at end bell mounting surface. Gently slide stator and harness (item 19) over rotor and align over mounting bosses on end bell. Slide two bolts (item 20) into slots at bottom of stator.

Install two lock-washers (item 30) and spacers (item 36) over bolts protruding from bottom of stator. Seat the bolts into the sub-frame (item 32).

Hold brush head assembly (item 1) upside down over stator and plug stator wires onto proper terminals inside brush head assembly. Attach ground wire (green with yellow stripe) to stator with two lock washers (item 34) and screw (item 33) as shown.

Use wire ties to neatly secure all of the electrical leads. Carefully, route the leads behind the circuit breakers so they will not contact the rotor. Install the brushes in the brush holder. Retain the brushes for assembly by inserting the brush holder tool or a straightened paper clip through the housing hole and the brush holder.

Seat the brush head over the rotor and stator. Slide two bolts into the slots at the bottom of the brush head and tighten them finger tight. Install two bolts into the slots at the top of the brush head. Torque the four bolts securing the brush head to the correct specifications per Table 1.

Install two lock washers (item 30) and two nuts (item 31) onto the bolts. Do not tighten at this time.

Tighten the rotor bolt to the proper torque specification.

Install a new expansion plug (item 35) into the rotor bolt opening on the brush head.

Torque the two stator-mounting nuts to the proper specifications.

Torque the engine mounting bolts to the proper specifications.

**Important Note:** Remove the tool holding the brushes in place.

### **Verify/Correct Stator Alignment**

Place unit on level surface.

Loosen nuts (item 31) on stator bolts (item 20) under sub-frame (item 32).

If spacers (item 36) can be easily rotated and a visible gap exist between the spacers and plate, add additional star washers (P/N 83033) between spacers (item 36) and sub-frame (item 32).

**Note:** Engine mounting bolts must be loosened so unit can be tilted and washers can be installed.

Re-torque engine mounting bolts to 145-155 In/Lbs.

Re-torque stator bolts (item 20) to 60-80 In/Lbs.

Remove spark plug and pull engine over, listening for interference between rotor and stator.

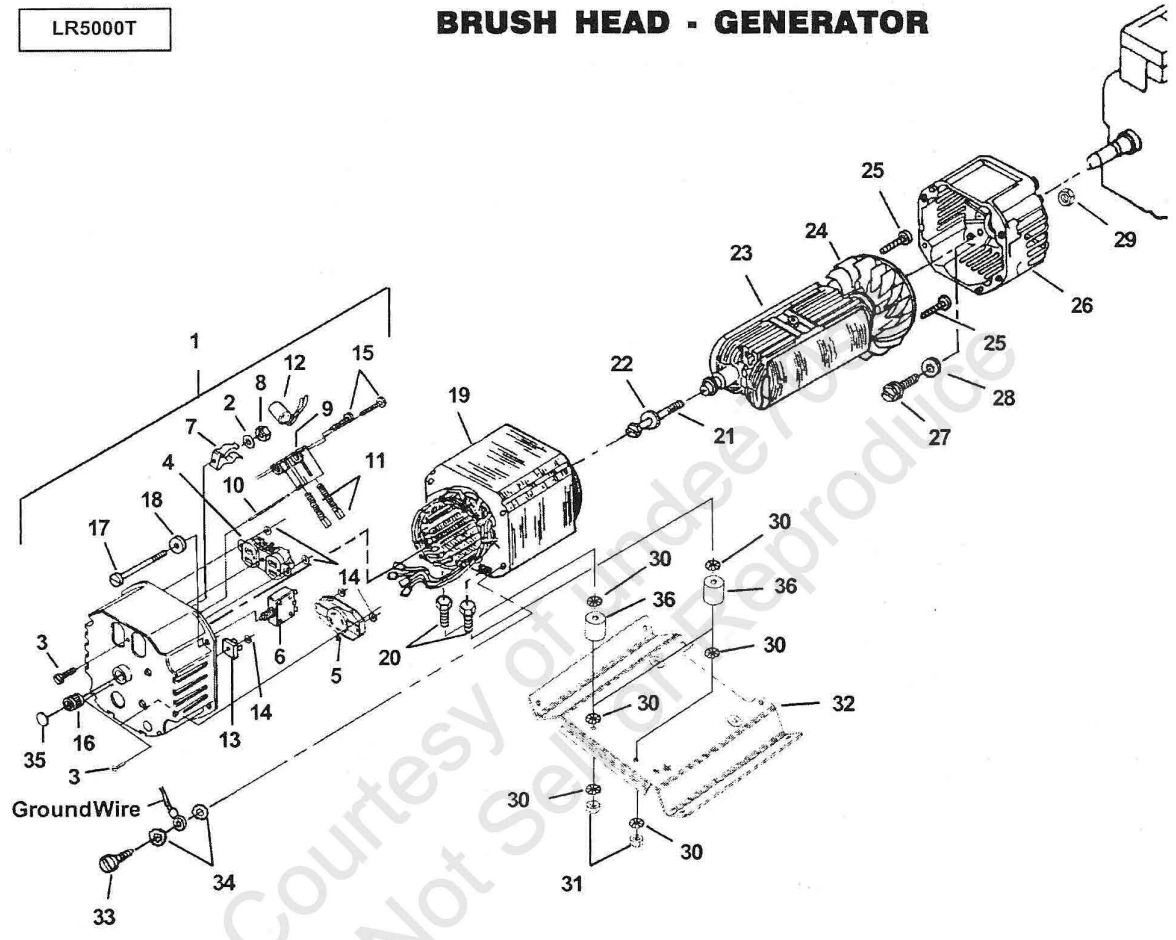

If no interference is heard, replace spark plug and start unit. Run unit at no load and again listen for any interference.

If no interference is heard, apply full load and verify proper performance.

If at any point interference is heard immediately, shut unit down and add additional star washers P/N 83033 as required.

LR5000T

### BRUSH HEAD - GENERATOR

## 1. Torque Specifications

Table 1

	SIZE & TYPE	QTY.	APPLICATION	TORQUE LIMITS in-lb
	7/16-18 Hex Knurl Nut (supplied with breakers)	1	Circuit Breaker to Brushhead	15-20
	5/16-24 x 9.250 Hex Machine Screw	1	Rotor Bolt	100-140
	¼-20 x 7.00 Hex Machine Screw	4	Stator Bolts	60-80
	5/16-18 x 1.500 Hex Machine Screw	4	Engine to Subframe	145-155
