

Homelite® designed this saw for Pros only

The new Homelite XL-400 Automatic is built with increased power and performance, better cooling, lower fuel consumption, yet it weighs less than the famous Super XL-Automatic!

Check these outstanding features, they add up to the biggest XL value ever offered to the professional cutter:

- New semi-Automatic compression release for easy starts. Reduces wear on all starter parts, clears a flooded engine. Automatically closes when the engine fires.
- New E-Z type starter permits repairs or adjustment from the outside by just removing two screws.
- Automatic bar and chain oiling (positive crankshaft driven) plus separate manual pump.
- Exclusive Power Tip® guide bar is standard equipment. Increases cutting performance, reduces chain wear and maintains better chain tension.
- New acoustically tuned Softone* muffler and fully vinyl covered Sure Grip handlebar.

NEW 32-to-1 ENGINE OIL

A revolutionary new oil developed by Homelite for air-cooled 2-cycle engines. The gas/oil ratio of 32:1 means an engine runs cleaner with less carbon. Piston rings, exhaust ports, muffler and spark plug stay cleaner, longer. Comes in modern pop-top cans.
