

# HOMELITE®

410 CHAIN SAW

# THE NEW HOMELITE® 410 A PRO LOOKS FOR IN

**EVERY FEATURE HOMELITE  
BUILT INTO THE NEW 410  
IS THERE FOR ONLY ONE  
REASON: TO KEEP YOU  
OUT THERE CUTTING FOR  
AS LONG AS YOU WANT  
TO WORK.**

Designed to fill the range where most of the work takes place, the 410 features a 4.1 cubic inch engine which is strong enough for heavy felling. Yet it's lightweight and versatile enough for limbing as well.

We designed it for power. With a chain speed of 3,940 feet per minute at 9,000 RPM, the 410 has more power than you'd ever expect in such a light-

weight package. The long-life, three-piece centrifugal lined clutch transfers more power to the bar and chain. And, you'll start in any weather with dependable capacitor discharge ignition.

The unique engine design gives you hundreds of hours of trouble-free operation. The carburetor is located away from direct engine heat to help prevent vapor lock in hot weather. Extra large fins on the powerhead keep the engine running cooler and lasting longer. The automatic oiler has a manual override to let you customize the oil flow to match your cutting needs.

When the weather doesn't cooperate, the 410 will. It stood the test under rugged conditions from -20°F to 110°F with flying colors. And to meet your varied cutting needs, it uses 16" to 31" guide bars.

# NO HAS THE ONE THING A SAW. EVERYTHING.

## THE MORE YOU ASK OF THE 410, THE MORE IT DELIVERS.

There's an advanced six-point vibration isolation system to absorb more of the engine's force. The air intake reduces noise and keeps out debris for longer life and reduced maintenance. And it has the kind of balance that only comes from superb engineering. To let you cut longer with less fatigue.

To add to its handling ease, the 410 has a Trigger Safety Interlock for fast, easy starts; a rubber cushioned hand grip for greater comfort; and front and rear handguards. The SAFE-T-TIP® anti-kickback device helps protect you and your saw.

Standard maintenance areas, such as carburetor chamber and air filter, are right at your fingertips for fast on-site maintenance.

**We built the 410 to outcut and outperform any saw in its class. To keep you and your saw working out there where the money is.**

**You owe it to yourself to give the new 410 a workout soon. Because it's got the one thing you've been waiting for. Everything.**

# HOMELITE® 410 CHAIN SAW... OUTCUTS AND OUTPERFORMS ANY SAW IN ITS CLASS.

Micro-mesh molded cartridge air filter can be quickly removed for cleaning or replacement.

Front handguard.

Powerhead design provides cooler operation for longer engine life.

Carburetor is easily removed, allowing quick visual inspection and service of the intake valves.

Carburetor is located away from direct engine heat, helping to prevent vapor lock during extreme hot weather.

Dual chamber Softone™ muffler with front-mounted, bottom discharge for quiet operation.

Rear handguard.
