NEW DESIGN

Slim. Trim. Easy to handle. That's the streamlined new design of the Homelite C-Series Chain Saws. Narrow, compact and perfectly balanced, each of these remarkable new saws has a rugged die-cast body reinforced with additional structural members to make it tough

enough to stand up even under the most strenuous, full-time cutting. All controls — chain oiler, ignition switch, choke — are grouped within easy reach of the operator's hand. And, all of the C-Series saws can be converted from direct to gear drive in 9 minutes or less!

CHECK THESE PROFESSIONAL FEATURES

1 New oil reservoir has side mounted opening. It's easier to fill and less apt to spill. The positive-action chain oiler can be operated with throttle hand.

2 Large, oversize air filter is protected from rain and snow. Located away from flying saw-dust, it gives you lots of cutting time before it needs cleaning. Can be cleaned and replaced in less than a minute and re-used many times.

3 Butterfly choke is the same as used on the top professional models. Stays where you set it to give you absolute control. Contributes to easy starting in any weather.

4 High-voltage ignition system is weather-proof. Starts fast regardless of the weather. Ignition switch is protected, yet readily accessible.

5 All-position carburetor delivers full-power cutting in any operating position. Lets you cut up, down or upside down.

6 Unobstructed flow of fresh, cool air to cylinder assures long engine-life.

7 Rugged new crankshaft is dynamically balanced with piston and rod for minimum vibration . . . gives maximum performance, long life.

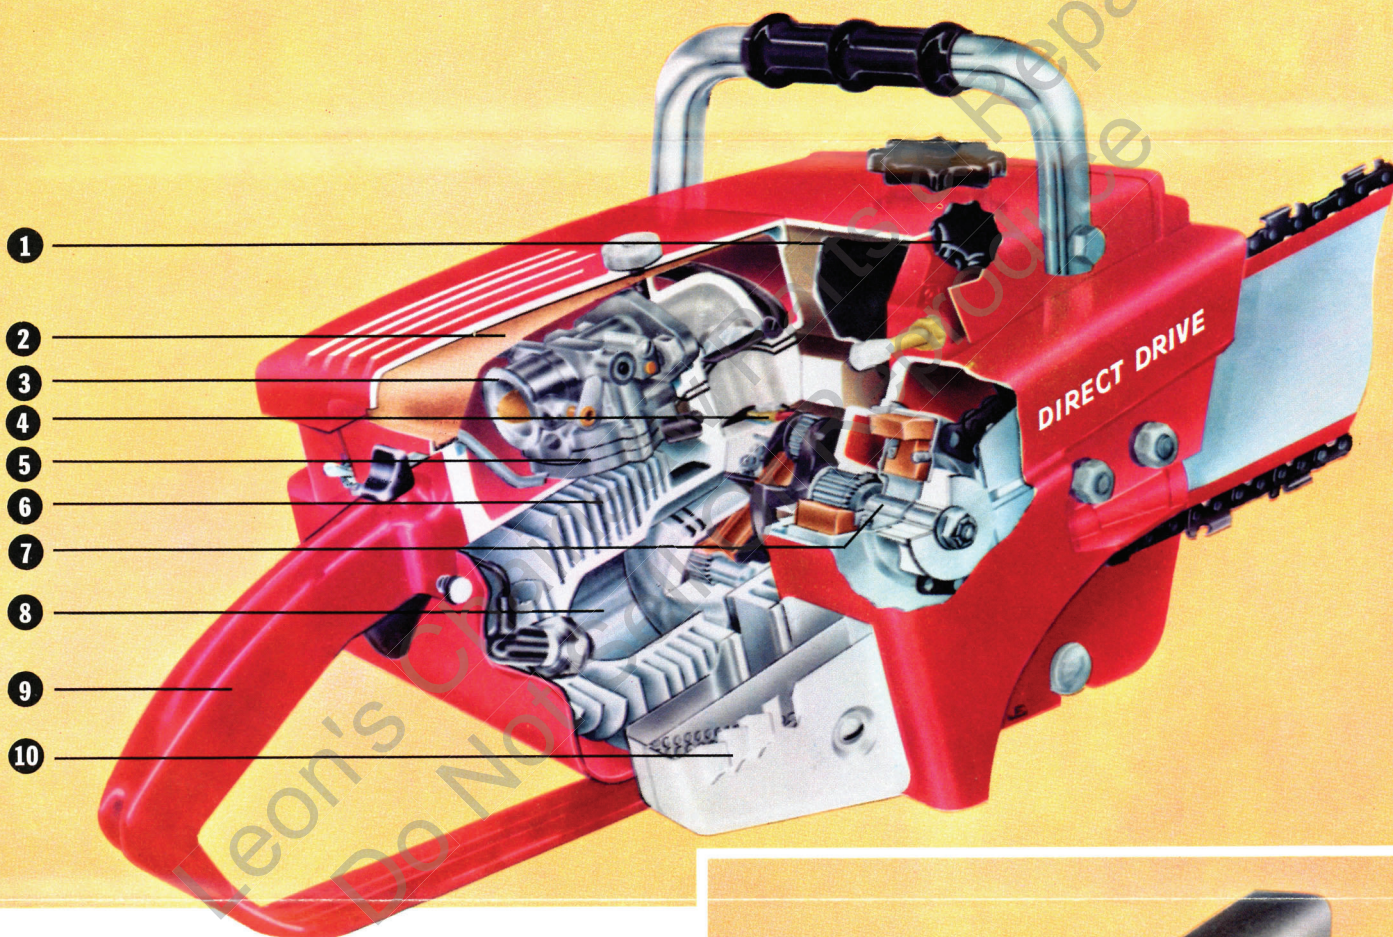

8 New cylinder position takes full advantage of Homelite's famous short-stroke engine. Delivers unflinching power.

9 Pistol grip and guard protect throttle from snagging, provide hold-down for easy starting. Throttle lock standard on C-7 and C-9.

10 Extra quiet spark-arresting muffler on C-7 and C-9. Straight stack muffler on C-5.

11 Rugged die cast construction gets maximum strength from cast-in structural members.

12 Narrow, compact design is perfectly balanced for easy handling, easy cutting, in any position.

Exclusive Convertible Drive

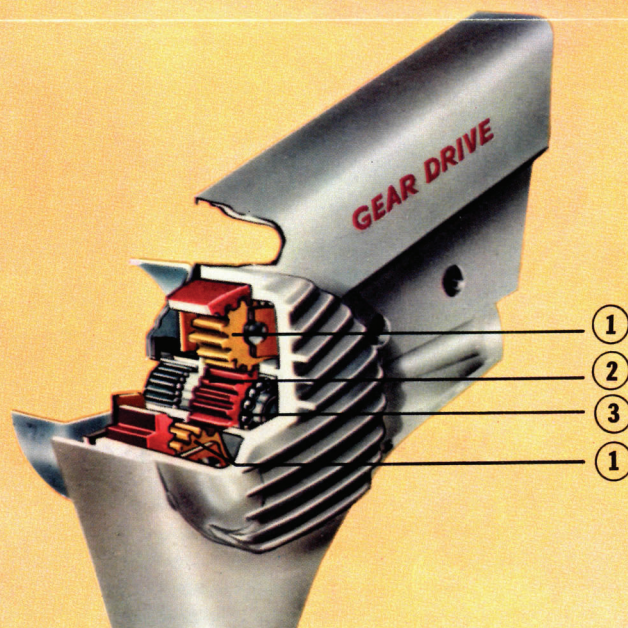

Homelite's exclusive planetary gear conversion unit lets you change the C-Series saws from direct drive to gear drive in 9 minutes or less. Gives you the convenience of having a fast-cutting direct drive for general purpose use or a rugged gear drive with plenty of extra lugging power for tough cutting jobs and for very large trees.

1. Planetary gears with 2.9-to-1 ratio reduce chain speed, save wear and tear on bar and chain. Deliver nearly three times the lugging power of the direct drive models.

2. The precision-formed gears are fully enclosed, sealed and lubricated for a long service life.

3. Ball bearing support at outboard end assures smooth running.

Dowels insure proper alignment of the conversion unit, simplify

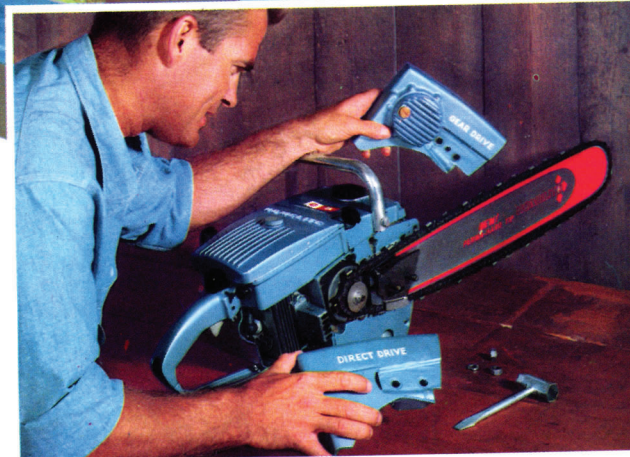

NEW HOMELITE C-5 WITH EXCLUSIVE

Convertible Drive

- 18 pounds less bar and chain (direct drive)
- Fells trees up to 3 feet in diameter
- Does every farm woodcutting job

The new Homelite C-5 is built and priced especially for farmers and occasional users. Loaded with professional features, it provides a low-cost way to do a top-notch job cutting timber, firewood and fence posts, clearing storm damage, pruning, trimming and doing the many other woodcutting chores around a farm. All-position carburetor delivers full-power cutting in any position. Flush-cut handle lets you cut level with the ground, leaves no stumps. Converts from direct to gear drive in 9 minutes or less. Avail-

Convert from Direct to Gear Drive in 9 Minutes or Less

Just remove two nuts and the clutch drum, attach Homelite's planetary conversion unit, tighten it up and you're ready to begin cutting with

C-SERIES CHAIN SAWS

CONVERTIBLE DRIVE

Convertible Drive

- 18½ pounds less bar and chain (direct drive)
- Fells trees up to 4 feet in diameter
- Extra power for production cutting

More powerful than the C-5, the new Homelite C-7 is perfect for production cutting and for all-purpose use around the farm. Comfortable handlebar grip can't slip, gives you better control. Throttle lock makes starting quick and easy. Spark arresting muffler is super-efficient, extra quiet, smoother running. And like all the C-Series chain saws, the C-7 can be changed over from a fast-cutting direct drive to a rugged and powerful gear drive in 9 minutes or less. Fells trees up to 4 feet in diameter. Available with straight

Convertible Drive

- 19 pounds less bar and chain (direct drive)
- Fells trees up to 5 feet in diameter
- Available with flush-cut or wrap-around handle

The most powerful saw in the C-Series, the C-9 is light and compact. Free-breathing pyramid reed valve and larger displacement give it the extra power needed to make it ideal for production cutting, tree farming and many other professional cutting jobs. Throttle lock makes starting quick and easy. Spark arresting muffler is super-efficient, extra quiet, smoother running. Equipped with special handlebar grip for positive, no-slip control. Spiked bumper plate gives you extra leverage for big trees. Available with
