

POWER-UP

New Homelite Super WIZ packs

Here is a new pace setter in pulpwood production cutting. The new Homelite Super Wiz is rugged, fast and built to take the steady day-after-day pounding of professional cutting. It's the big brother of the famous Homelite Wiz.

You get more power in the new Homelite Super

Wiz because it has greater cylinder displacement. And in the Dura-Bore cylinder the running surface is intimately bonded to the cylinder for coolest operation and longest life. Add Homelite's famous, rugged pyramid reed valve and you get smooth performance — more power.

FOR PROFIT

more wood-cutting power...

Another important feature is the new Micro-Mesh Polyester Fiber air filter. Because of its near-vertical position, it tends to shed particles — stays clean longer. It can be cleaned many times — easily. Just tap it on a log, or slosh it with solvent, or blow it with air — in minutes you're back cutting with full power.

You've got to get this 19 pound Super Wiz in your hands. Then you'll know! Get down to your Homelite dealer, get your free demonstration and ask about the specially priced super Wiz Bow package. Buy one of these Super WIZs and you'll make more money cutting pulp or saw logs because they're "Powered-Up for Profit"!

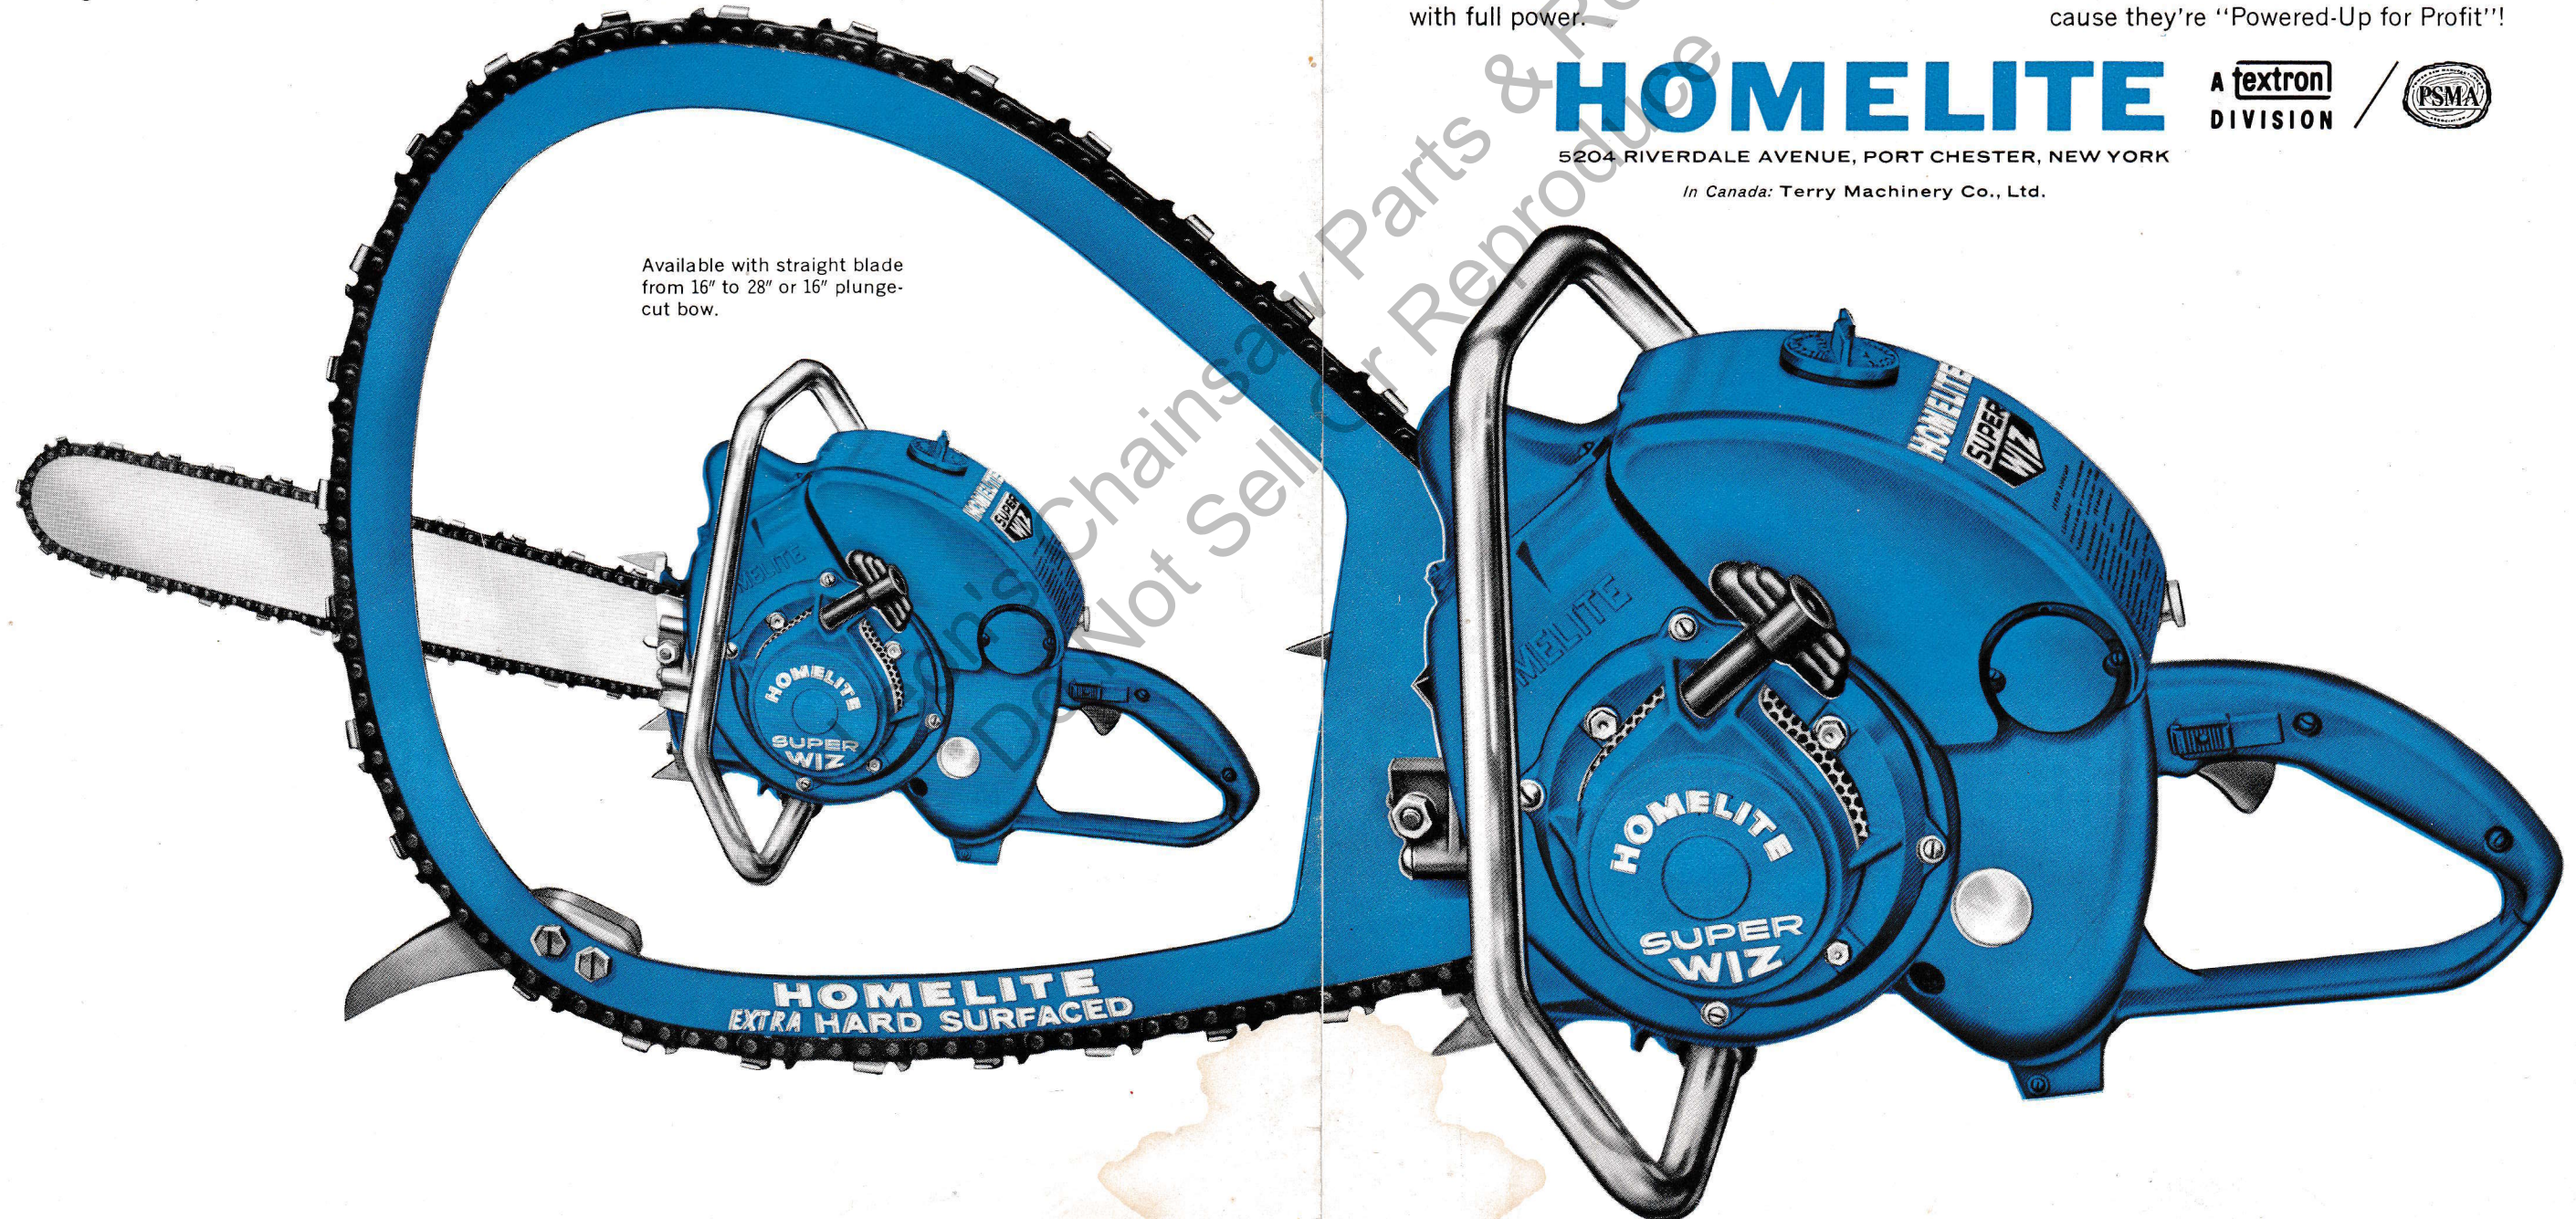

HOMELITE
