

At last the American pulp and timber industry can survive without foreign aid.

For several years many American loggers have been relying on European chain saws like these.

They felt American saws just couldn't do the job as well.

But at Homelite, we think we've closed America's chain saw gap.

With an entirely new 3.5 cubic inch saw called the Homelite 350. The 350 lets you fell, buck and limb for pulp and timber just as quickly as any European saw.

With less weight to lug around (13.2 pounds*). With as little noise (thanks to a large, two-chambered muffler). And without wearing you to a frazzle (the Swedish, Finnish and Czech Testing Institutes found the 350 has the lowest vibration ever recorded for a production saw).

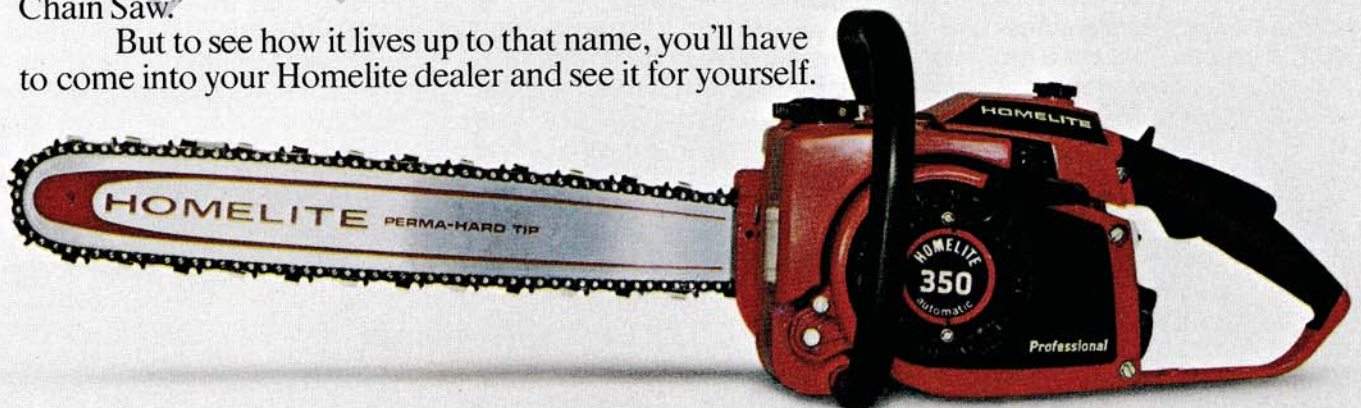

Other features make the 350 easy on you also. Like the excellent balance, the new, smooth configuration, adjustable automatic oiling and a right-angle bar adjustment that lets you adjust the tension in the chain without scraping off your knuckles.

But the 350 is more than a great saw on paper. We put it through an incredibly intensive testing program: cutting frozen trees through the heavy Scandinavian winter. And because of Homelite features like solid-state capacitor-discharge ignition and one-piece clutch, Scandinavian loggers found the 350 could stand up to all the pounding they could give it.

In fact, the 350 was so successful that Scandinavian loggers are starting to look to Homelite for foreign aid.

By now, you probably have a good idea of why we've named this, "The Great American Chain Saw."

But to see how it lives up to that name, you'll have to come into your Homelite dealer and see it for yourself.

Homelite® introduces "The Great American Chain Saw."
