The policy of McCulloch Corporation is one of continual improvement in design, manufacturing and engineering advancement wherever possible to assure still finer two-cycle power tools. Hence, specifications, equipment, colors, design and manufacturer's suggested list prices are subject to change without notice and McCulloch Corporation reserves the right to make such changes without prior notification or obligation to backfit or supply backfit components for units previously shipped from the factory.

This Master Illustrated Parts List gives the name, number and interchangeability between engines, of service and replacement parts which were used on or are presently available for all MAC 5-10E chain saws manufactured to date.

Information about the List and how to use it will be found on the back cover.  
Read the information before you start to use the List.

**MCCULLOCH DOUBLE NEEDLE CARBURETOR ADJUSTMENT**

1. Turn Lo Speed screw counterclockwise until it no longer touches stop and butterfly can be completely closed.
2. Hold finger against closed butterfly and turn Lo Mix needle clockwise until butterfly starts to open. Turn the needle counterclockwise two and one half turns.
3. Hold finger against closed butterfly and turn Lo Speed screw clockwise until butterfly starts to open. Turn the screw clockwise one half turn more.
4. Turn Hi Mix needle clockwise until resistance is felt, then turn the needle counterclockwise two full turns.
5. Turn the Lo Mix needle to obtain smooth rapid acceleration every time without faltering. Check for smooth idle for all positions of the saw and readjust the Lo Mix needle if necessary.
6. Adjust Hi Mix needle for maximum power under load. Turn the needle in for leaner and out for richer mixture. Do not adjust the needle for leaner mixture than necessary to obtain smooth, even running under a cutting load.

**MCCULLOCH SDC-2 CARBURETOR ADJUSTMENT**

- Carefully turn both the high speed and idle needles clockwise until resistance is felt, then turn both needles counterclockwise one full turn.
- With engine warmed up, adjust the idle speed screw in or out until the engine idles just below clutch engagement speed.
- Adjust the idle mixture needle in or out (leaner or richer) to obtain smooth, rapid acceleration every time without faltering. If necessary, readjust the idle speed screw.
- Adjust the high speed mixture needle for maximum power under load. Turn the needle in for leaner and out for richer mixture. Do not use any leaner setting than necessary to obtain smooth, even running when cutting wood.

The information contained in this Master Illustrated Parts List is based on original Illustrated Parts Lists, Engineering Records and the Master Parts Price List and is accurate to the best of our knowledge.

Each chain saw model is given a code letter. Whenever the code letter appears in the right hand column, the part is used on the engines of the model for which the code letter stands. When a part is used on all models covered in the Master Illustrated Parts List, the word "All" appears in the right-hand column instead of the code letters.

Names of parts have been checked and made to agree with the names given in the Master Parts Price List except in a very few cases where additional nomenclature was required.

The illustrations of the individual parts do not necessarily picture all the differences between parts with the same item number because the illustrations would be too complicated for use if they did. Instead, the illustration shows a representative part for each item number.
