

**HOMELITE®**

introduces 3 new chain saws

**XL-901**

**XL-903**

**XL-904**

for the professional user

# 3 New Homelite XL-900 chain saws the perfect combination of light

These all-new Homelite chain saws were especially made for the professional user, and that means they have special features. They're faster starting with new adjustable starting speed control. They're easier handling with a new convenient choke control and easy-access manual oiler. They're smoother-performing, with a new rugged lightweight piston, improved engine balance, and new cushioned handlebar mounts. And you get longer engine life, with a new full-power carburetor, improved engine lubrication at peak rpm, and a cooler-running cylinder. Then Homelite came up with a new more durable wrist pin locking design. And to make these new pros even more professionally rugged, they have a new full contact clutch with shoes of high density friction bronze. The relocated fuel line not only improves the saws' appearance, but also protects the fuel line itself. (Add to this a relocated fuel tank vent which reduces plugging from dirt, dust, ice and snow.)

## XL-901

features new adjustable starting speed control • new easy-access manual oiler • new convenient choke control • new rugged lightweight piston • improved engine balance • new cushioned handlebar mounts • new full-power carburetor • improved engine lubrication at peak rpm • cooler-running cylinder

**XL-903** features new Simplex Starting System with adjustable starting speed control and new automatic compression release • Positive, Gear Driven automatic oiler • new convenient choke control • new easy-access manual oiler • positive gear driven automatic oiling • new rugged lightweight piston • improved engine balance • new cushioned handlebar mounts • new full-power carburetor • improved engine lubrication at peak rpm • cooler-running cylinder

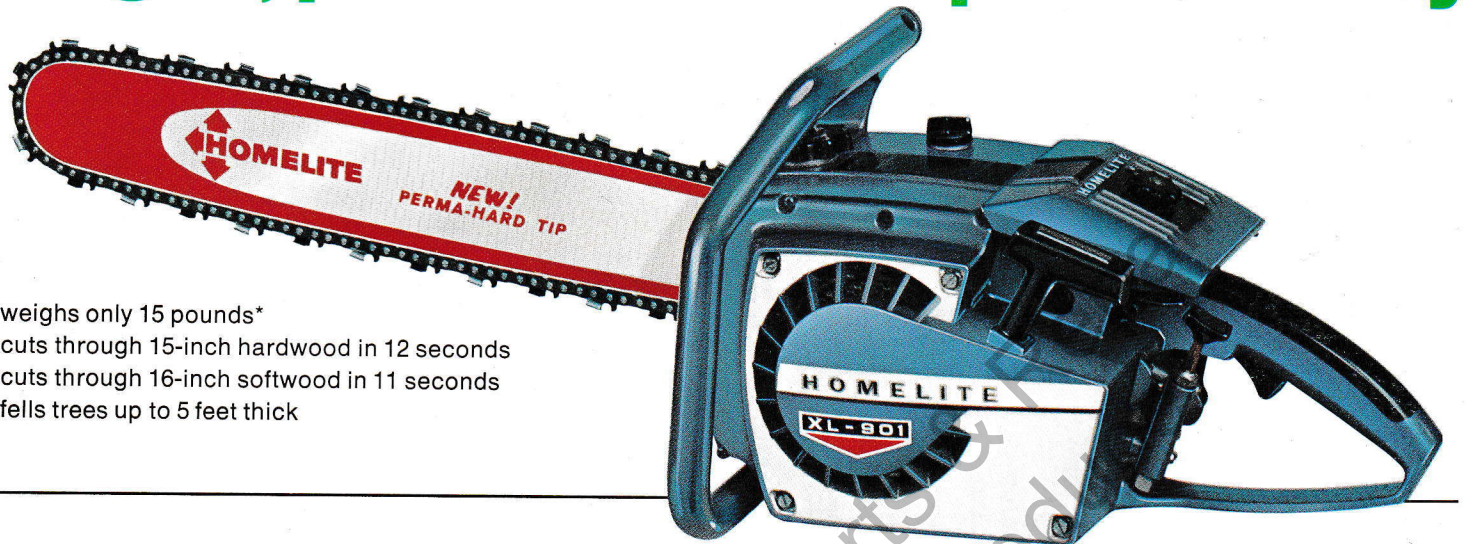

**XL-904** has solid state ignition, new Simplex Starting System, and Positive, Gear Driven automatic oiler • solid state ignition. No breaker points to wear or adjust. Hotter spark from starting spin to peak RPM. Fires when other systems fail • new Simplex Starting System • new convenient choke control • new easy-access manual oiler • positive gear driven automatic oiling • new rugged lightweight piston • improved engine balance • new cushioned handlebar mounts • new full-power carburetor • improved engine lubrication at peak rpm • cooler-running cylinder

Job-tested improvements make the XL-900 series chain saws quicker starting, faster cutting, easier handling in the field.

the fastest-selling in the world

MAKE YOUR OWN FIELD TEST.

*You'll see why Homelite XLs are the world's most popular chain saws.*

Trimming is easier because of light weight and perfect balance, reasons why farmers and occasional users also like the new XL-900 chain saws.

Production cutters in the South have a choice of standard bar, clearing guide or bow.

Rugged construction and professional features make these Homelite chain saws ideal for the man who cuts wood all day, every day.
